BEANS

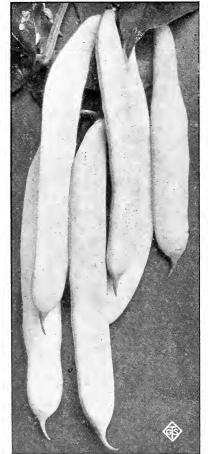

CULTURE.—About the 1st of May, if the ground is perfectly warm, select a warm, dry sheltered spot, any good soil, preferably a moist, deep loam, not over-rich in nitrogen, dig and manure very slightly; make drills 2 inches deep and 18 inches to 2 feet apart; drop the Beans 3 inches apart in the drills and cover not more than 2 inches deep. Hoe well in dry weather to keep down the weeds. Sow every two weeks up to about August 1st, for a succession. Two pounds (1 quart) to 100 feet of drill.

DWARF LIMA AND DWARF WHITE BEANS

CULTURE.—Plant as soon as the warm weather has fairly set in, or start a few under glass four weeks before setting out. Soil should be light and rich. Sow in drills 2 feet apart, the Beans about 6 inches apart, and covering about 2 inches. Two pounds to 100 feet of drill. Mulching keeps the pods from the ground.

The Beans are extra large; and are a pure, creamy white; very tender. Burpee'a Bush Lima. A bush form of the large, flat, Pole Lima, growing only 18 to 20 inches high. Frijoles de Bejuco

CULTURE.—Sow as the soil becomes warm and dry, from the first to the latter part of May for all except Limas, in hills 4 feet apart each way. Limas should not be planted until warm weather has fairly set in. Two pounds (1 quart) of Limas will plant about 100 hills, allowing four or five Beans to a hill, and of the smaller sorts about 200 hills. Plant Pole Limas eye down, 2 inches deep. Poles 8 to 10 feet long should be frmly set in the hills before planting seed.

CORN, SWEET or SUGAR

Mais MaizKukurydza

CULTURE.—As soon as danger from frost is past, plant in hills 3 feet apart each way, and 5 or 6 kernels in a hill. The hills should be prepared before planting by digging in a shovelful of compost and a double handful of high-grade fertilizer. In spring plant 1 inch deep; later plantings 1½ to 2 inches deep. Thin out to three plants in the hill, or, if in rows, to 12 inches apart. Two pounds will plant 150 to 200 hills. Hoe often and draw soil up to stem; break off side shoets. Court requires a warm rich soil and a sunny exposure. Plant for a sun. soil up to stem; break off side shoots. Corn requires a warm, rich soil and a sunny exposure. Plant for a succession every two weeks until middle of July.

Curled Tall Green Scotch	.15	. 50	1.75

Cayolo Rapa Chou-Rave

KOHLRABI

Colinabo Knollkohl

CULTURE.—Sow in spring, about ¼ inch deep, in rows 18 inches apart, afterward thinning the plants to 8 to 10 inches. Soil should be same as for cabbage; a rich loam. Do not let the earth get into the heart of the plants and do not cover the thick stem or knob. One dunce will give about 1,500 plants, enough for 300 feet of drill. For early plants, seeds may be sown under glass in March.

Popone Melon Muscade

MUSKMELON

(Cantaloup)

Melon Muscatel Melone

Muskmelon, Thorburn's Surprise

CULTURE.—Select a light, rich, sandy soil, and, after all danger of frosts is over and the ground has become warm and dry, plant in hills 4 to 6 feet apart each way, six to twelve seeds to a hill. When up and all danger of insects has passed, pull out all but three plants. Cultivate until the vines cover the ground, and pinch the ends of the growing shoots to induce early fruiting. Ashes or lime are excellent to sift over young plants when the dew is on, to prevent the attacks of insects. The hills should have a mixture of well-rotted manure and Thorburn's Complete Manure dug into them.

MUSTARD MostazaMoutarde

CULTURE.—Sow thickly during early spring in shallow drills, and press the earth well down. 1/4 lb. Lb. Giant Southern Curled. Very large leaves..... \$0.10 \$0.25 \$0.85

CipolloOignon ONION

CebollaZwiebel

CULTURE.—Sow in rich, sandy soil, in drills 1 foot apart, at the rate of 4 to 5 pounds to the acre, or 1 ounce to 100 feet of drill. Thin to 3 to 4 inches, using the rake and hoe frequently to keep down the weeds. The finest Onions are produced by the new method of sowing the seed in hotbed in February and March and transplanting the seedlings to the open ground. Against the coming of the Onion maggot scatter tobacco dust about the bases of plants. For thrips use kerosene emulsion. It is best to destroy all plants attacked.

Pomme de Terre

POTATOES

Patatas

MAINE-GROWN EXPRESSLY FOR SEED

Carman No. 1 Potato

CULTURE.—Three to four barrels to the acre, 1 peck for 100 feet of row. Select a rich soil, neither dry or wet. Cut the potatoes into chunky pieces of onequarter or so, not thin slices, trying not to cut the eyes and having about three eyes on each piece. Plant in rows 3 feet apart, and the sets 1 foot in the rows and about 4 inches deep. Place in bottom of hill a good handful of Thorburn's Complete Manure and mix with the soil. For diseases and pests in general, beginning when the plants are up to 6 to 8 inches, spray with a mixture of Bordeaux. Paris green and Arsenate of Lead, every two weeks or so.

These are prices ruling January 1st; later on they may be higher and are subject to change without notice. We ship Potatoes entirely at customer's risk.

One barrel or sack weighs about 165 pounds net; one bushel, 60 pounds net

TOMATO

Tomate Liebesapfel

CULTURE.—Sow in a hotbed in early spring, about ½ inch deep, or the seed may be sown in shallow boxes and placed in a window when one does not wish to have the trouble of making a hotbed. One ounce will produce 1,500 to 2,000 plants. Transplant to the open ground when all danger of frost is past, setting the plants 3 to 4 feet apart each way. Soil should not be wet, but should have a good supply of moisture. It should be deep, with plenty of well-rotted manure.

The varieties marked (*) are best for forcing

The New Marglobe Tomato

The most important introduction since Bonny Best. An unusually productive hybrid of great

promise.

Days to Maturity, 140. It is a hybrid from Marvel, a Government strain developed from Vilmorin's Marvel of the Market, and Livingston Globe, a pink-fleshed Tomato. This stock has been selected for a pure scarlet, globe-shaped type, having the fine characteristics of the Globe. Being a hybrid, however, it has far more vigor than the Globe, is a much heavier producer, and is slightly earlier. Its magnificent appearance makes it a valuable market Tomato; sweet flavored, popular variety for home consumption. Pkt. 25c.; oz. \$1.75; ½ lb. \$6.50; lb. \$22.00.

LAWN GRASS SEED

How to Make a Lawn

To produce a good lawn requires considerable work; do not make the mistake of trying to cheapen the preparation, for nowhere in the garden is the old axiom of "what is worth doing, is worth doing well," better illustrated than in lawn-making.

The soil must be deep; a good lawn cannot exist on poor soil. Plow the ground deeply—a foot is none too much. Apply to the soil before plowing, a heavy coating of well-rotted stable manure. Fresh manure carries too many weed-seeds; its use should be avoided. If rotted manure is not available, sheep manure or chemical fertilizers may be substituted.

Ground bone meal, 1½ tons to the acre, is a good lawn fertilizer, furnishing plant food over a long period; 100 pounds of nitrate of soda and 100 pounds of dried blood to the acre should be applied at the same time; these furnish nitrogen for immediate use. Sheep manure at the rate of 1,000 pounds to the acre may be used instead of nitrate of soda and dried blood. When only a small lawn is being made, use 20 pounds of bone meal to 250 square feet, ½ pound each of nitrate of soda and dried blood, or 6 pounds of sheep manure. Harrow and cross-harrow until the ground is thoroughly pulverized; the better harrowed the ground is, the better the grass will grow and the more permanent the lawn.

An acre requires 125 pounds of seed or one pound to each 250 square feet. Harrow or rake the ground lightly, and roll with a heavy roller.

THE THORBURN LAWN GRASS MIXTURE

Produces a splendid turf of a beautiful color and texture; quick growth and permanent. 1 lb. 55c.; 10 lbs. \$5.00; 25 lbs. \$11.00; 100 lbs. \$40.00.

LAWN GRASS SEED FOR THE SOUTH

This is a splendid mixture of grasses particularly adapted to withstand extremes of drought and heat. 1 lb. 65c.; 10 lbs. \$5.50; 25 lbs. \$13.00; 100 lbs. \$47.50.

LAWN-RESTORING MIXTURE

For reseeding of old lawns. Quickly takes hold where the grass is thin and in hard or worn spots. 1 lb. 65c.; 10 lbs. \$5.00; 25 lbs. \$12.00; 100 lbs. \$45.00.

POLO AND PLAY-GROUND MIXTURE

Produces a turf of good color and texture which withstands hard wear. 10 lbs. \$6.00; 25 lbs. \$14.00; 100 lbs. \$50.00.

SPECIAL SHADY MIXTURE

Adapted for shady places under trees or close to walls and hedges. 1 lb. 70c; 10 lbs. \$6.50; 25 lbs. \$15.00; 100 lbs. \$55.00.

SEASHORE MIXTURE

Specially compounded for successful sowing in sandy soil and under difficult climatic conditions, etc. 1 lb. 55c.; 10 lbs. \$4.50; 25 lbs. \$10.50; 100 lbs. \$40.00.

TERRACE MIXTURE

Suitable for terraces. Compounded of grasses which take root in such a way as to prevent erosion, yet give a beautiful turf. 1 lb. 65c.; 10 lbs. \$4.50; 25 lbs. \$10.50; 100 lbs. \$40.00.

GRASS SEED MIXTURES FOR MEADOWS AND PASTURES

It is a well-ascertained fact that thicker and more prolonged growth is produced by a mixture of many sorts It is a well-ascertained fact that thicker and more prolonged growth is produced by a mixture of many sorts of grasses than by only one or two. For every different kind and condition of soil there are grasses that are especially suitable. Some sorts do best on high ground and in dry weather; others prefer plenty of moisture. Some mature so early and others so late that from the beginning of spring until winter sets in there is no time when one species or another is not at its best. Grass Seed may be sown either early in spring or in fall, from the first of September to the middle of October; in this latitude the best time to sow meadow Grass Seed is during the late summer and early fall, that being the natural seeding time for grass. This will, of course, not give very much of a crop the following year; the grass will be fine and thick, but rather short, and not a heavy yield. The best meadows are seeded alone, without any "nurse" crop, while if seeded with rye, that crop being the stronger and quicker grower, will monopolize the ground so that it will be another year before much of a crop of grass can be had. For over a hundred years the House of Thorburn has made a specialty of grasses. We were probably the first to introduce to this country, for commercial distribution, the many valuable natural and cultivated foreign species that now take such an important part in our agricultural economy. The formation of permanent pastures and meadows has, for many years, been a subject of careful study with us, and the Thorburn Mixtures for seeding

and meadows has, for many years, been a subject of careful study with us, and the Thorburn Mixtures for seeding grass-lands has received universal recognition. The quantities given are the minimum, and may often be increased

to advantage.

Prices f. o. b. New York and subject to market fluctuations without notice

MEADOW MIXTURES, Both Hay and Pasture	20 lbs.	100 lbs.
For Light Soils. 100 lbs. to the acre	\$8,50	\$40.00
For Heavy Soils. 90 lbs. to the acre	9.00	42.00
For Woodland. 100 lbs. to the acre	9.50	45.00
PASTURE MIXTURES		
For Light Soils. 80 lbs. to the acre	8.00	37.50
For Heavy, Wet Soils. 80 lbs. to the acre	9.00	42.00
For Woodland. 90 lbs. to the acre	9.50	45.00
If areas to be sown contain both light and heavy spots, we recommend tha	t they h	e sown

separately with the proper mixtures. This method is more economical than using a mixture presumed to be adapted to such a composite situation.

		If You Desire to Sow for HAY ONLY, Use	10 lbs.	25 lbs.	100 lbs.
TIMOTHY.	Best Grade.	30 lbs. to the acre	\$1.85	\$4.25	\$16.00

WET GROUND. We strongly recommend that wet ground be sown in late August. Such areas are usually foul with weeds and in addition are water-logged in early spring, rendering it impossible to properly prepare the seed bed. The weeds crowd out the young grass and a poor stand is obtained. In August the ground is dry and warm, the weeds have finished growing, consequently the grass, which by nature grows best in the early fall, quickly establishes itself before winter.

Grasses in Separate Varieties

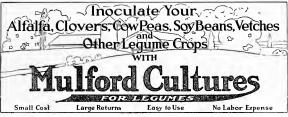

Grass Seeds are scarce this season. Prices subject to fluctuation		
Consider Plant Construction of the Constructio	Lb.	100 lbs.

How Supplied

MULFORD CULTURES for Legumes are supplied in concentrated form, labelled according to the exact amount of culture material (concentrate) actually supplied in each bottle (1 ounce, 3 ounce, etc.), with definite recommendations, in terms of bushels, as to the amount of seed same will inoculate. This basis simplifies the question of determining the correct quantity of culture required for proper inoculation.

The packages are in convenient sizes, ready for use. The directions which accompany each package, are plain and easy to follow. In ordering, be careful to

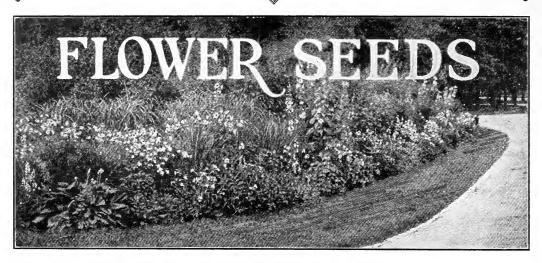

specify what crops are to be inoculated.

Why buy expensive commercial nitrates when you can grow legume crops and thus increase your yield, and, at the same time, increase the nitrates and enrich and renovate the soil, by Nature's own method?

CULTURAL HINTS ON FLOWER SEEDS

The following abbreviations are used throughout the Flower Seed Department:

HA., Hardy Annuals HHA., Half-Hardy Annuals TA., Tender Annuals HP., Hardy Perennials HHP., Half-Hardy Perennials HB., Hardy Biennials HHB., Half-Hardy Biennials HC., Hardy Climbers GP., Greenhouse Plants GS., Greenhouse Shrubs GB., Greenhouse Bulbs GC., Greenhouse Climbers

Hardy Annuals, HA. A rich, sandy loam, made very fine, is the most suitable soil for the smaller Hardy Annuals. There is nothing better than soil taken from old hotbeds, or sods from an old pasture that have been piled up and allowed to rot for two to three years, and then mixed with a little old stable manure and sand. The soil should be placed in shallow boxes or pots and set in a warm window, hotbed, or, if possible, in a greenhouse. Use shallow boxes or seed-pans from 2 to 3 inches deep, and of convenient size.

Sow the seed in April or May, according to your latitude. Do not make the mistake of sowing the seed too

Sow the seed in April or May, according to your latitude. Do not make the mistake of sowing the seed too deeply—covering only to the depth of the thickness of the seeds is generally sufficient, except in the case of Sweet Peas, which should be planted 2 inches deep, or in the case of medium-sized seeds, like Balsams and Zinnias, which should be planted at least a half inch or more. Fine seeds, such as Portulacas, need only to be pressed into the soil with a piece of board or the palm of the hand. The earth should always be pressed down firmly after sowing flower seeds, or there is danger of their drying up before the roots get firm hold of the soil.

After the seeds are up, plenty of air and moisture should be given them, but water should be judiciously applied or they will "damp off." Transplanting to other boxes may be done when the young plants are well out

of the seed-leaf. When pots are not available, boxes, and the like may be used.

Half-Hardy Annuals, HHA. Follow same cultural directions as given for Hardy Annuals. Seed may be sown any time after April 15th, as the hotbed will be sufficient protection, but it is advisable to cover the glass with a mat or straw until danger of frost is past. Give plenty of ventilation during the day. After May 30th sow in the border, like Hardy Annuals.

Tender Annuals, TA. Use very light sandy compost and provide drainage in the pots by placing pieces of broken pots or bits of sod in the bottom. Cover the finer seeds no more than $\frac{1}{12}$ inch deep and press the soil firmly over them. In order to have early bloom and strong plants, sow the seed in boxes in March, placing them in a warm greenhouse or plunging in a moderate hotbed, being careful to protect them from the cold, shade them from the midday sun, and water with a fine hose.

Hardy Perennials, HP. Follow the same cultural directions as given for Hardy Annuals, using the same soil, but the Perennials may be sown in the open border from July to September. The seeds of many perennials are slow to germinate, some requiring several months and some as long as two years. It is a good idea to cover the plants lightly with straw, leaves, or any dry litter, as soon as the frosts commence, so that they may be protected from the extremely severe winter weather.

Half-Hardy Perennials. HHP. Use same soil and cultural directions as for Hardy Annuals. Nearly all kinds of Half-Hardy Perennials may be sown in the open border in a warm and sunny spot as soon as the soil has become dry and warm, so that those who do not have cold-frames or greenhouses need not be deprived of this class of flowers, though they may have to wait a little later for their blooms.

Hardy Biennials, HB. These require the same soil and treatment as the Hardy Perennials.

Half-Hardy Biennials, HHB. Use same cultural directions as given for Half-Hardy Perennials.

Hardy Climbers, HC. Follow same cultural directions as given for Hardy Annuals or Hardy Perennials, depending on which class they belong to.

N. B.—If permission is given us to substitute, we shall use our best judgment in sending equally good sorts for those originally ordered, or a memorandum will be kept of any items not sent and the seeds will be forwarded as soon as they arrive.

ASTERS

The Aster will thrive in any soil, from a light sand to a heavy clay. Cover seed with 1/4 inch of soil. If the soil is too poor, add a good supply of Ground Bone, mixing thoroughly. Seed sown in the open ground in May will produce plants that will bloom finely in September and October. When the plants have three or four leaves, transplant, 12 to 18 inches apart each way, into well-prepared beds. Many of our customers have complained that the listing of Asters is too confusing. We have, therefore simplified our list as much as possible.

HOLLYHOCKS (Althaea Rosea)

Although Hollyhocks are very permanent and hardy for the first winter, it is advisable to sow seed every year of these splendid, hardy perennials, as the flowers on young, vigorous plants are much finer than on old ones. Sowings should be made in April or May, and not later than June, to flower the next year. In final transplanting give each seedling a foot or more space each way for development. They succeed best in an ordinary deep, rich soil. They make a glorious show in the garden with their splendid spires of flowers and are fine for the back of the border and for hiding unsightly fences. Water well in dry weather. Average height, 6 ft.

PANSY (Viola tricolor; Heartsease)

Spring sowings should be made early so as to secure good flowers during the early rains. Seed sown in a cool, moist place in June and July, and well tended, will give good flowering plants for Spring. If they come into bloom in the heat of the summer, the flowers may be small at first, but, as the weather becomes cooler they will increase in size and beauty, and make a glorious show in the garden. Early fall sowings give the finest flowers in spring, and a bed of Pansies is one of the most beautiful sights a garden can show.

SWEET PEAS

A deep, rich, moist soil is best suited to Sweet Peas, hence a trench should be dug $1\frac{1}{2}$ feet deep and filled with very best loam mixed with bone meal or well-rotted manure. For each double row make the drills about 12 inches deep, and 9 to 10 inches apart. Sow plentifully, covering about 2 inches deep, and, by degrees, as the vines grow up, fill the trenches with soil, and thin out to about 2 or 3 inches apart. Spring sowings should be made just as early as the ground can be prepared. One ounce will sow a row of twenty-five feet. A packet will sow a row of four feet.

STOCKS

For fine early flowers sow under glass in March or April, transplanting the seedlings when an inch high into other pots or boxes, or into fine soil spread over some discarded hotbed. In May transfer to garden beds of deep, rich soil, setting the plants a foot apart. Later sowings may be made in the open ground in May. HHA.

ted red; green foliage	1.75	10.00

DAHLIAS

HOW TO GROW DAHLIAS

First, do not plant too early, never before May 1st, and much later, if possible all the way up to July 15th, in the vicinity of New York, and up to August 1st further south. In planting lay the tuber on its side about 6 inches from the surface.

Give the plants plenty of room, placing them 4 feet apart each way.

Do not fertilize too heavily. It encourages wood growth at the expense of blooms. A little well-rotted stable manure worked into the soil a month before planting is sufficient and a light feeding of Thorburn's Complete Manure when buds are developing.

A light soil is to be preferred to a heavy one. If plants grow too luxuriantly and produce few blooms, cut them back within 1 foot from the ground. Stake

the plants so they will not be blown down.

Dahlia blooms will keep longer if they are cut early in the morning (this applies to all flowers) and the stems immediately plunged into warm water and left until water cools, after which place in cold water to which a little salt has been added.

NOVELTIES

Descriptions are Those of the Raisers

Jersey's Delight. HC. The color of this variety is a beautiful rose-pink; flowers medium in size, and borne on stiff stems. Plants \$4.50.
Jersey's Empress. D. Anthracene violet in color. The large flowers are of very pleasing formation,

having narrow and wavy petals of great depth and substance. Color is practically sunproof. Tubers \$9.00; plants \$4.50.

Trentonian. D. Color is in the brown tones; the giant flowers are fine in form and produced in great quantity on fine, clean, stiff stems. Tubers \$7.00; plants \$3.75.

Charles Stratton. D. A splendid exhibition variety. Extra large; pale gold shaded and tipped with old rose. Has consistently won as the largest flower in the show. Tubers \$4.00; plants \$2.00.

THORBURN'S SELECTED DAHLIAS

THE UP-TO-DATE EXHIBITION COLLECTION

The varieties submitted below are the cream of the latest prize-winning Dahlias. Tubers will be ready for delivery April 1st. Started plants from May 1st to June 15th.

MISCELLANEOUS POPULAR DAHLIAS

The following sorts are well known for their quality and dependability and are offered at prices within the reach of all Dahlia-lovers.

Adrienne. Pom. Flowers are of perfect form, rich crimson-scarlet, slightly tipped with yellow. Free blooming and strong growing. 25c. each, 3 for 70c., 6 for \$1.30.

E. F. Hawes. C. A lovely shade of clear salmon-pink. The blooms are produced most freely on fine long stems. 35c. each, 3 for 90c., 6 for \$1.70.

Kalif. HC. The color is a rich pure scarlet. The plants are of strong growth and bear their mammoth flowers freely on fine long stems. 75c. each, 3 for \$1.90.

King of the Autumn. D. This is one of the most admired varieties. An early and very free bloomer, on fine stems. The immense bloomers are of fine form, and an excellent autumn shade—buff-yellow sufficed terms cotten. \$1.00 caches 3 for \$2.70. 6 for \$5.00. suffused terra-cotta. \$1.00 each, 3 for \$2.70, 6 for \$5.00.

Nerissa. Pom. A charming little flower that should be included in every collection. It is soft pink tinted with silver. 75c. each, 3 for \$1.90, 6 for \$3.65. **Princess Pat.** D. A most beautiful shade of old-rose.
\$1.00 each, 3 for \$2.70.

Queen of Whites. Pom. This is considered one of the best white Pompom Dahlias in existence. It

bears flowers with the greatest freedom. 25c. each, 3 for 70c., 6 for \$1.30.

Starlight. C. Rich deep yellow flowers which lighten up to a dainty lemon tint and finally to white at the tips. A fine exhibition Cactus Dahlia. 75c. each, 3 for \$2.00.

The Emperor. D. A truly immense flower of exquisite form, held well above the healthy foliage. The color is a most beautiful rich maroon. \$2.00 each.

Prices on above are for tubers. Delivery April 1st, or earlier if required.

HYACINTHUS CANDICANS

They contrast elegantly with gladiolus. Planted anywhere, singly or in clumps, they are gorgeous. \$1.50 per doz., \$10.00 per 100.

MONTBRETIAS

Should be planted in April or May and protected with leaves in winter. They may	ay be allo	wed to
remain in the ground and will continue to bloom for many seasons.	Doz.	100
Etoile de Feu. 2 ft. Very graceful soft red flowers, with orange throat	\$1.25	\$8.00
King Edmund. Fine orange-yellow flowers	1.25	8.00
Speciosa. Pleasing orange-red, with yellow throat	1.25	8.00
All Varieties Mixed	1.00	5 00

GLADIOLUS

Gladioli are very easily grown. Any good soil suits them. Plant the corms (as soon as all danger from frost is past) about 3 inches deep and 7 or 8 inches apart. By planting at intervals up to July 1st, these fine flowers can be had in bloom all through the summer and fall, the later flowers being the best. About the end of October, when the leaves begin to wither, the corms should be taken up, dried in the open air, and then stored in a dry place, free from frost, for planting next spring.

GLADIOLUS PRIMULINUS OR RUFFLED TYPES

This species of Gladiolus created a sensation wherever it was exhibited. The blooms are distinct in their pleasing form and arrangement. Although the in ividual flowers are not large, they carry an air of grace altogether different from the stiff effect of other Gladiolus.

Extra-large bulbs $1\frac{1}{2}$ inches and upwards in diameter	Doz.	100	
Alice Tiplady. Brilliant orange-salmon, with golden throat	\$1.00	\$7.00	
Maiden's Blush. Enchantress pink of the finest form. Extra early; splendid fo forcing.	1.00	7.00	
PRIMULINUS HYBRIDS. The extremely decorative spikes of delicately colored flowers, 3 to 5 feet high, are most useful for cutting. Colors vary from pale primrose to rich golden yellow, pink, buff, etc.

HARDY GARDEN LILIES

Hardy Lilies are among the most gorgeous and easily grown subjects for the herbaceous border, and, without crowding other plants, throw up their sturdy stems each year with an eager desire to unfold their wonderful blooms over the heads of nearby companions, and hold the admiring gaze of those who pass by. Lilies thrive in partial shade, that is, the lower stem and bulb are better shaded by the foliage of other plants. Their stem roots, which feed almost on the surface of the soil, need plenty of food and moisture. They revel in the "peaty" soil of a rhododendron bed, but thrive equally well in a rich sandy loam. The most beautiful forms are Lilium auratum, L. speciosum, vars. melpomene and rubrum, L. regale, L. tigrinum, and L. Henryi. Plant from 4 to 6 inches deep.

inches deep.			
Auratum (The Golden-banded Lily of Japan). One of the stateliest of all the har 6 feet high, and bears twenty or more large and fragrant flowers 8 to 10 inches i			
in clumps of six or so, they make an attractive sight. Flowers white, spotted of	leep re	d, with	bright
in clumps of six or so, they make an attractive sight. Flowers white, spotted of yellow band running through the center of each petal, in August.	ach	Doz.	100
